A tragedy in Twiggs County resulted in a record \$4.5 Million settlement. Through discovery it was revealed that the trucking company located in Seattle Washington failed to adequately train its drivers. Truckers are trained to use a "scan" technique to ensure that they are constantly surveying their mirrors, instruments and the road. In this instance, a trucker using a defective scanning technique failed to look at the road for over 22 seconds or 1936 feet resulting in a rear end collision that propelled the victims' car across the median and into the path of another tractor trailer truck.

**AC LAW** used compelling footage of the driver demonstrating the defective scan technique and detailed Doctors' testimony to convince the trucking company to pay a fair amount. A large portion of the award was structured resulting in an estimated payout of over \$6,000,000.00 to the victim. This amount will be used by the victim to pursue her dream of becoming a nurse and helping

others in need. The trucking company finally removed the driver from driving status and subsequently

fired him due to his failure to accept responsibility and be re-trained. **AC LAW** went beyond the simple facts of the case to determine the true reason

behind the collision. It was important to the victim to ensure that everything was done to prevent this tragedy from ever happening again.

## DOCTOR’S LIES REVEALED

A young family experienced the effects of a Doctor’s apathy when an infection took the life of a new mother. Through discovery and crosschecking numerous documents, **AC LAW** discovered that a doctor was lying as to his true location during the critical time period for the victim. It turned out that the doctor was trying to hide an affair and had manufactured an innocuous time line that attempted to both insulate him from liability and the scrutiny of his wife. The insurance company

and the doctor were forced to modify what had been an aggressive defense. In the end the young family was provided compensation which will ensure that the family is taken care of.

## A TRUCK DRIVER’S POOR SAFETY RECORD HELPS MAXIMIZE THE VICTIM’S RECOVERY

A large company negligently handed the keys of a powerful truck to an untrained young driver with a poor driving record.

**AC LAW** was able to discover that the driver had a significantly poor driving record. Although the weight of the vehicle didn’t require a CDL, **AC LAW** was

able to argue that the company should have known of the driver’s poor record and should never have allowed him to drive. This argument helped increase the value of the case and ensure an adequate award for the victim who suffered a broken leg.

## BACK SURGERY = \$875,000

By using the latest technology **AC LAW** attorneys were able to obtain a fair recovery for a victim injured by a trucker's negligence. With the use of extensive video footage of the victim's life pre/ during/ post operation, an accurate picture of the impact on the victim was conveyed to the defendant.

## PAUL AYERBE OF AYERBE & COWART, LLC, OBTAINS RECORD VERDICT IN BIBB COUNTY

When State Farm refused to offer anything on a soft tissue injury the insurance company assumed the legitimate claim would go away. Although the accident resulted in no damage to the victim's car, Paul Ayerbe could see the impact the injury had on the young insurance sales man. Bucking the trend of conservative juries, a Bibb County jury saw through the insurance company's arguments and

awarded a fair verdict to compensate the victim. This is considered to be the largest verdict for a soft tissue injury arising out of an undamaged car in Bibb County history.
